

NEW LEASE OF LIFE... FREECYCLE

FREECYCLE

Tennants UK are proud of being the first manufacturer to offer a number plate recycling service to our partners. After all, we all want a more sustainable world and actively look for ways to reduce our environmental impact. In addition, local and national leaders are pushing schemes to increase overall recycling quotas. Freecycle will make recycling your waste number plates a simpler & more effortless process.

Save more of your workshop & pre-sales teams time by signing up to Tennants Number Plate recycling service. This service is completely FREE and is included as part of the solution we offer eligible Dealerships & Service Centres.

WASTE PLATES

Number Plates are sent to be cleaned & sorted.

RECYCLED

Processed into flakes, pellets or metal ingots.

FREE

Freecycle is Free for all Dealership partners.

CLOSED LOOP

Materials are reused for products indefinitely.

OUR MISSION

We are excited to provide this recycling service to supplement our greener number plate components. For example, our LG Enviroplate backings are made using 90% reclaimed plastic & are recyclable again. Oralite Reflective, both Wet and Dry, is manufactured in one of the most carbon-neutral low-emission plants in Germany. The result means your workshop teams send less waste to landfill and invest more in closed-loop sustainability.

PLATES ARE SORTED, CLEANED & PROCESSED

THE PROCESS

Your waste number plates are collected and sent to be processed, cleaned, and sorted into materials. Acrylic PMMA is processed into flakes or pellets, which can be moulded once again. LG Enviroplate and other plastics are also turned into pellets and reused for number plates. Any metal plates and retro-reflective layers are melted down into ingots for new products.
